The first hydrophilic coating guiding catheter that reduces friction for smooth introduction & precise tip positioning

AGILE  
HYDROPHILIC COATED GUIDING CATHETER

## Hydrophilic coating will change the guiding catheter landscape...

## ...even challenging cases will look easy from now on

### • Hydrophilic coating providing new frontiers

- Smooth catheter introduction
- Low friction during catheter advancement in tortuous and calcified anatomy
- Reduced vessel spasm in radial approach resulting in more patient comfort
- Less trauma to the vessel wall reducing the risk of debris flowing downstream which could lead to TIA's
- The uncoated proximal 25 cm of the catheter stays outside the body which makes manipulation easier

### • Very precise control

- No stick slip effect due to Hydrophilic coating provides more accurate tip positioning in ostial lesions
- The uncoated segment in the valve of the sheath prevents unintentional movement of the catheter during the procedure
- No catheter friction provides real 1:1 torque control of the tip
- Encapsulated ultra thin high strength flat wire braiding provides high kink resistance against torsional and radial compression and excellent pushability characteristics

### • Largest inner lumen over the whole range

- Good contrast injection, also in combination with kissing balloon technique
- Larger lumens offer expanded device compatibility for large profile devices and enables downsizing

### • Superior back up support

- Excellent shape retention during prolonged procedure time
- Minimal temperature softening of the catheter providing more passive backup support
- Uncoated segment in the tip providing good grip at ostium and support of opposite aorta wall to give additional passive backup support
