LIMITLESS POSSIBILITIES

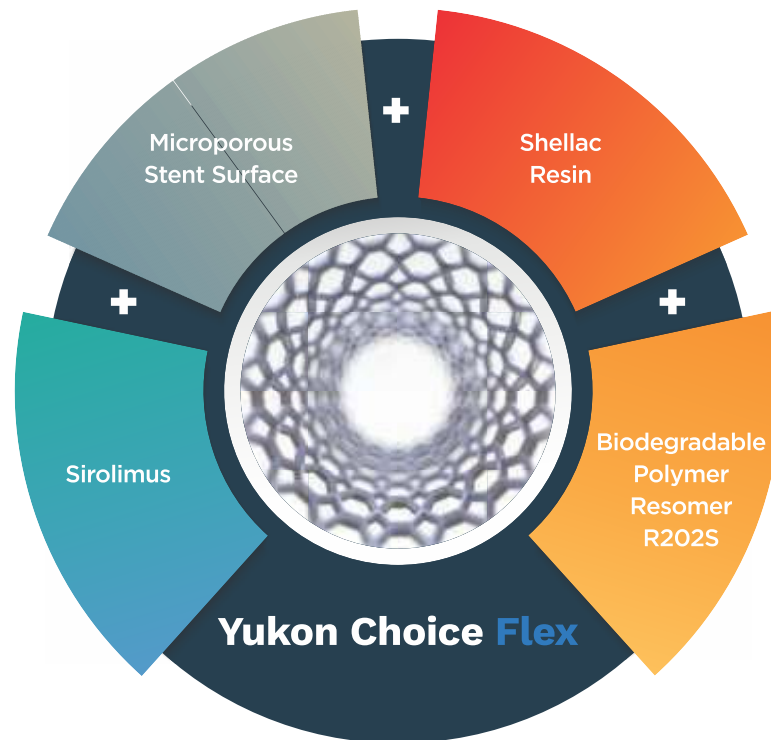

# Yukon Choice **Flex**

Sirolimus Eluting Coronary Stent System

Finding ways to the true joys of life.

Next generation DES providing synergy of biodegradable polymer with microporous surface to enhance optimal performance

## Less Polymeric Load Compared To Other DES

- One million pores per  $\text{cm}^2$  with average depth of  $2\ \mu\text{m}$  ensures optimum drug release with minimal use of polymer
- Shellac Resin ensures better polymer-drug binding with negligible polymer flaking during stent expansion
- Drug and polymer are co-released in 6-9 months leaving behind bare metal stent surface

## Better Endothelialisation & Superior Strut Coverage

- Drug polymer matrix coated only on the abluminal side using patented stent coating technology for drug release only to target tissue
- No polymer on the luminal side ensures healthy endothelialisation and reduces the incidence of stent thrombosis

# Yukon Choice Flex

Sirolimus Eluting Coronary Stent System

Advanced platform for redefining flexibility  
in tortuous anatomy

## Ideal Flexible Approach

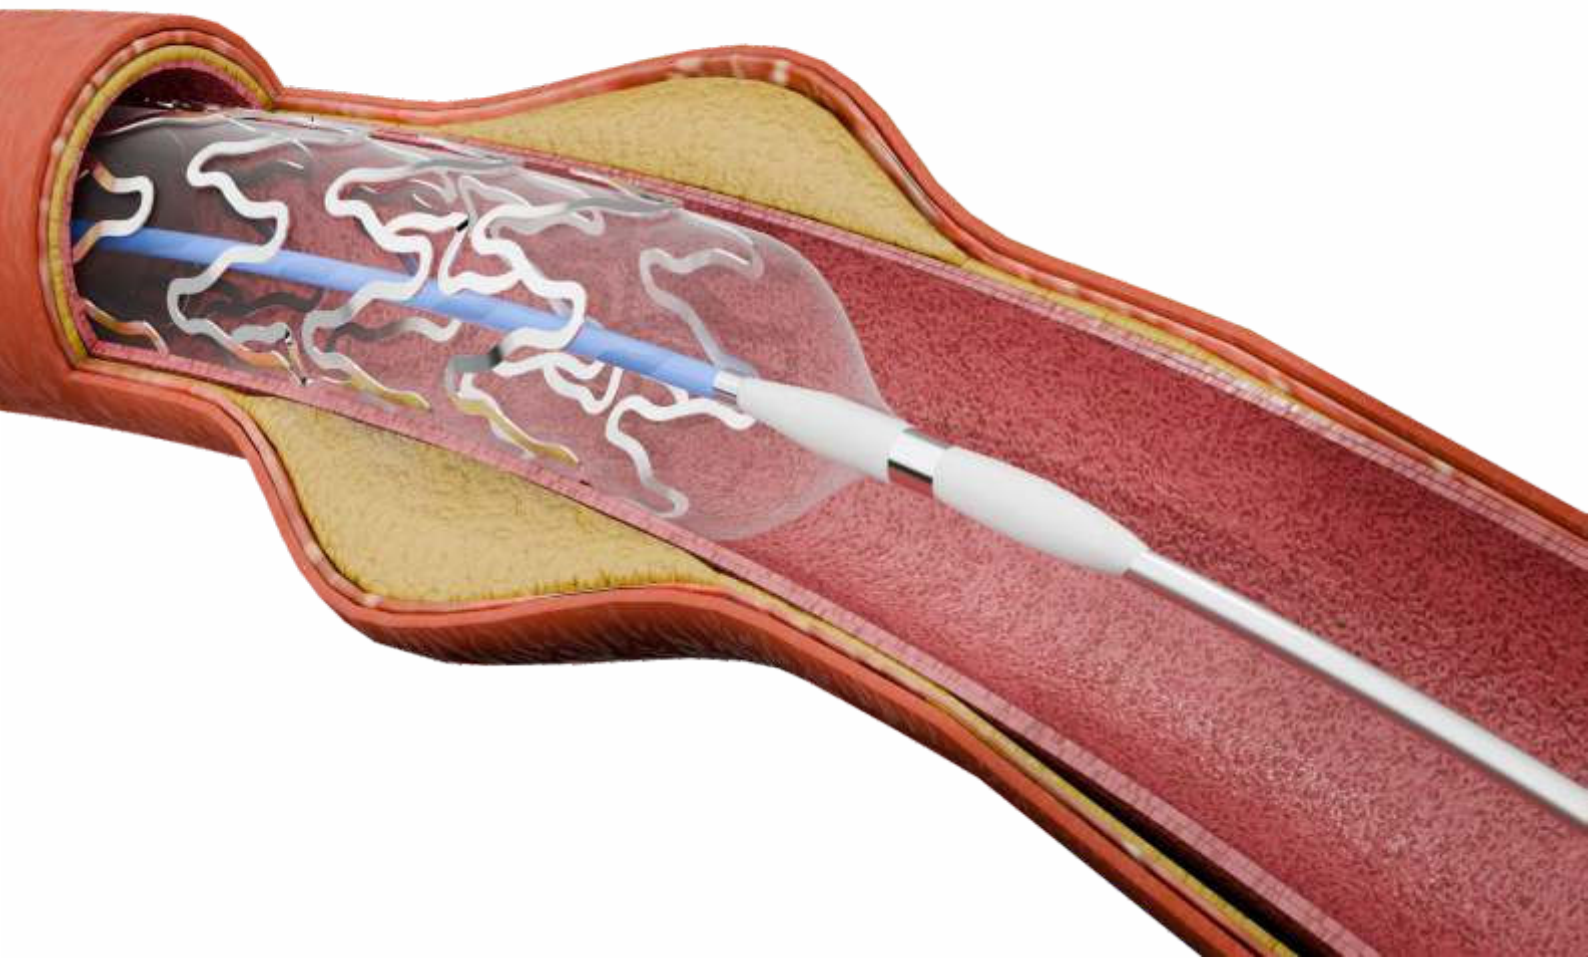

Yukon Choice Flex offers new generation delivery system with Flexi platform providing unmatched delivery in most tortuous vessels.

## Enhanced Delivery System

The customized 2-Connector stent design of Yukon Choice Flex with thinner structural elements confirms for optimal deliverability.

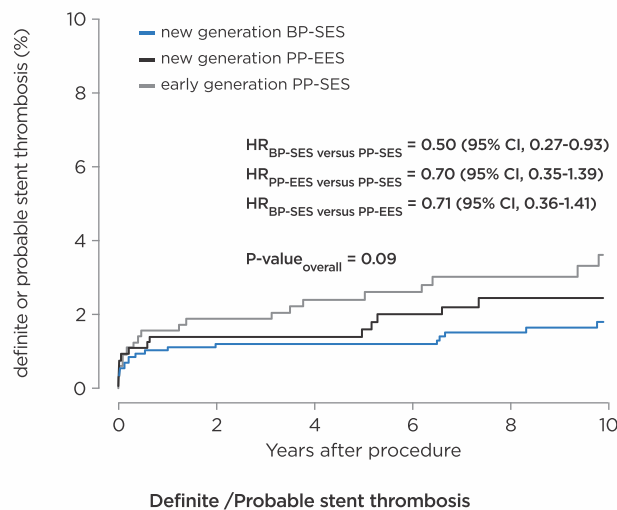

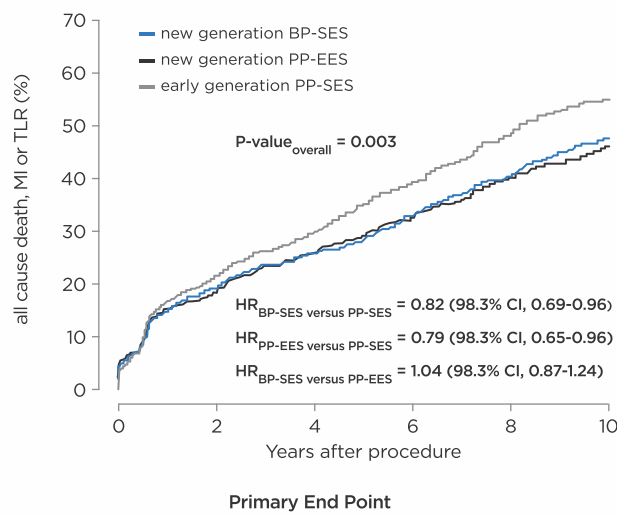

## Proprietary Hypotube

The new shaft design offers optimal force transfer with excellent push-ability and kink resistance allowing high manoeuvrability, justifying its use for the most tortuous vessels.

# 10 YEARS CLINICAL DATA OF EFFICACY & SAFETY

In this unique long term analysis at 10 years, Yukon has shown the lowest rate of Definite/ Probable Stent Thrombosis with a significant risk reduction than Cypher (50%) and numerically lower TLR rates as compared to Xience (29%) while maintaining the similar efficacy.

Comparison of clinical outcomes at 10 years in patients treated with new-generation BP-SES versus new-generation PP-EES versus early generation SES.

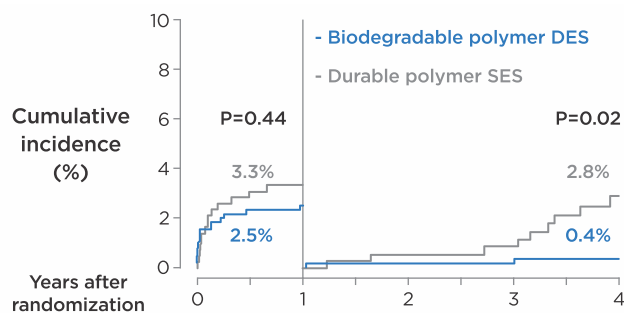

\*As per Clinical data with SS stent using similar microporous surface and drug coating technology

## Unmatched Safety- In Complex Patients Subset

Long-term outcomes of biodegradable polymer versus durable polymer drug-eluting stents in **patients with diabetes**: a pooled analysis of individual patient data from 3 randomised trials

At 4 years, Biodegradable Polymer DES Yukon showed significantly lower rates of Stent Thrombosis compared to Durable Polymer SES in patients with Diabetes Mellitus.

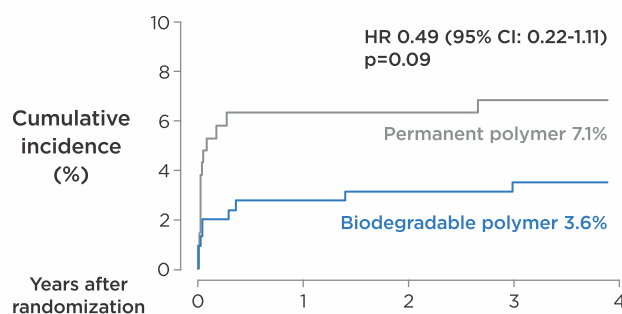

Secondary safety end point: definite or probable stent thrombosis

Long-term outcomes of biodegradable versus durable polymer drug-eluting stents in **patients with acute ST-segment elevation myocardial infarction**: a pooled analysis of individual patient data from three randomised trials

At 4 years, Biodegradable Polymer DES compared to Durable Polymer SES demonstrated improved overall clinical outcome, reduced need for revascularisation as well as lower incidence of cardiac death or MI and reduced stent thrombosis in patients with STEMI.

Definite or probable stent thrombosis for the pooled population in each of the treatment groups. CI: confidence interval; HR: hazard ratio

## TECHNICAL SPECIFICATIONS

Stent Material	Cobalt Chromium (L605)
Stent Surface	Microporous Surface
Coating	Abluminal Coating
Strut Thickness	Small Vessel 68 micron, Medium Vessel 79 micron
Polymer	Biodegradable Polymer (Resomer)
Drug	Sirolimus Drug
Proximal Shaft	> 0.65 mm (1.9F)
Distal Shaft	> 0.88 mm (2.70F)

Usable Length	143± 5cm
Guiding catheter compatibility	5 F Guiding catheter
Guide wire compatibility	0.014" PTFE guide wire
Nominal Pressure (NP)	11 bars
Rated Burst Pressure (RBP)	16 bars
Crossing Profile (Ø 2.5 mm)	1.03-1.28 mm
Lesion entry profile	0.39mm

EC	REP
